

# file backup

## Safe and Easy Backup

Until recently, the backup process has been difficult, time-consuming and expensive. File Backup changes all that by making backup an internet-based service that is ideal for individuals and small businesses. Just install the File Backup software on your PC and begin backing up your data to our secure, professionally-managed facilities – no more expensive equipment to buy and maintain. Enjoy enterprise-quality data protection at a fraction of the cost.

## All the Essential Features

Feature	Benefit
<b>Automatic Backup</b>	The backup process should be easy, regular and consistent to be effective. Our automatic backup scheduler lets you decide the ideal backup days and times. Set it once and that's it. Backups happen effortlessly and on schedule.
<b>Manual Backup</b>	Manual backups are fully supported as well. After finishing an important document, just click the backup button to back up immediately.
<b>Point-and-Click Restore</b>	No hoops to jump through. Just click on the "Retrieve" tab to instantly find the file you want to restore. Restore files via the internet with 24/7 availability.
<b>AES Encryption</b>	Keep the prying eyes of the internet out of your important data with the newer and safer AES encryption standard. All data stays encrypted until it returns to your computer.
<b>Differential Technology</b>	Block Differential technology backs up only the changed parts of your files for far faster, smarter backups.
<b>Versioning</b>	Our popular versioning feature allows you to keep multiple versions of your files. If you accidentally alter or delete the newest version of your file, simply restore an earlier version of your file.
<b>Reliability</b>	File backup is built on the world's no. 1 solution for backing up and restoring files and offers an enterprise-quality service for businesses and individuals.
<b>Experience</b>	Rest assured we are not some fly by night; we have been offering online backup as a core service for almost a decade.

## Data Center Information

With File Backup, you can send your important data to our enterprise-grade facilities that offer exceptional business continuity. These buildings are disaster-hardened, temperature-controlled and offer maximum security.

- 24/7 manned facilities, closed-circuit surveillance and biometric access
- Six onsite transformer substations
- Five 1500-ton centrifugal water chillers
- 3 x 2000 KW diesel generators with onsite fuel storage
- Redundant Liebert 30-ton HVAC units
- 12 switch sites and 35 different carriers onsite

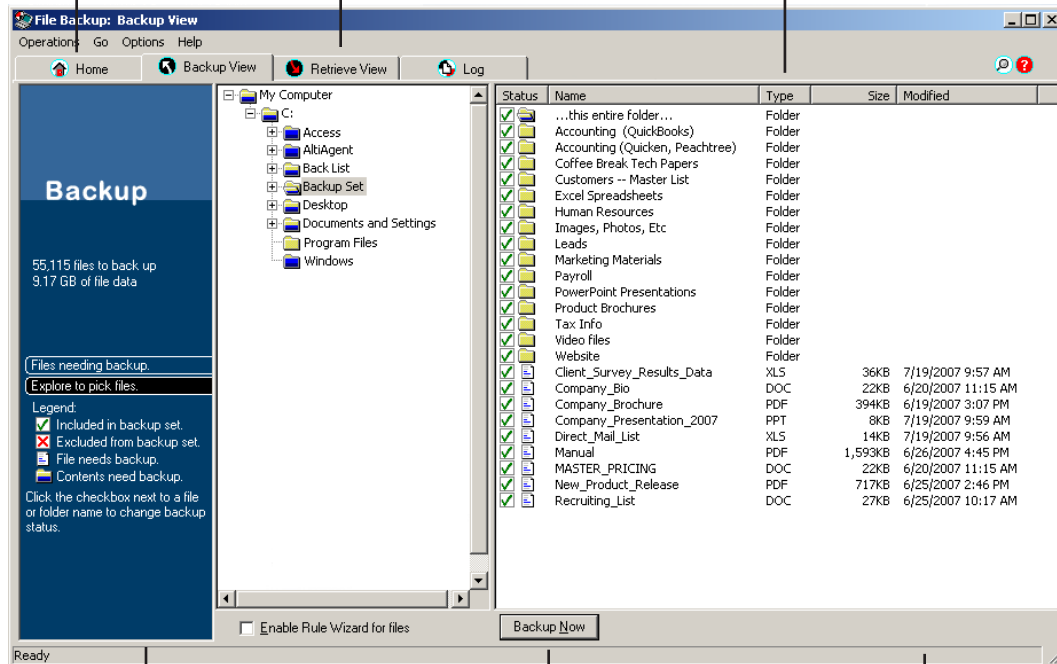

# file backup

**“User-Friendly”** tabbed windows and a clean layout make for extremely intuitive backup.

**“Point-and-Click Restore”** for simple, fast file recovery 24 hours a day, 365 days a year.

**“Windows Interface”** the familiar Windows interface makes it easy to locate your files.

**“Block Differential Technology”** means that only small portions of a changed file actually need to be backed up. Combined with data compression, this results in fast, easy backups.

**“Automatic Backup”** Use the backup scheduler for effortless, consistent backups at your designated time. And manual backups are fully supported also.

**“AES Encryption”** means your data is safely encrypted before it leaves your computer and remains encrypted until it returns to your computer.

## How it Works

- **Install the File Backup** software, and it will scan your computer to identify files that need to be backed up. These selected files form what is called your “backup set.”
- **Encryption** converts your “backup set” to an unreadable format so it is completely safe for transmission and storage over the internet.
- **Compression then shrinks your** backup data to optimize internet transmission times, use less storage space, and as an added measure of security.
- **Transmission**, the final step, sends your compressed and encrypted “backup set” to the offsite secure data center servers.

## Free Trial

Get a 15-day trial of the File Backup service. This is a risk-free, fully functional version of our online backup service. Download the free trial at:

[www.filebackup.net](http://www.filebackup.net)

## System Requirements

**Computers supported:** Desktops, Laptops, Workstations, File Servers  
**Platforms;** Windows XP, 2000, NT, Me, 98, 95

**Internet connection:** DSL, cable, LAN or dial up
